

# TEMPERATURE INSTITUTE

The purposes of the association are:

1. To develop conceptually and methodologically a new science of temperature.
2. To stimulate the creation of standardized temperature measurement instruments in order to make them verified and recognized by public administrations.
3. To obtain and generate duly anonymized databases for ulterior scientific research.
4. The generation of scientific knowledge, both in relation to health and social effects from the data obtained.
5. The building of a new branch of ethics about the social and individual optimums of temperatures.
6. The promotion of public policies aimed at the sustainability of ecosystems and the Earth planet in general, including environmental taxation related to the excess of artificial temperature regulation.
7. The building of social awareness about the subjective optimal temperatures, questioning the excess of artificial regulation and acclimatization.
8. The proposal of cultural and entertainment activities with lesser ecological impact.
9. The Deliberation about proposals for a more sustainable and intangible economic systems.
10. Social coordination with other associations, institutions, organizations and governments, to create a more sustainable and circular economy.
11. The foundation and promotion of a new branch of Aesthetics and an artistic movement about temperatures, regarding the primordial aspect of senses.
12. The development of the arts and the cultural diffusion.
